

## Sverniciatore all'acqua Coating remover

### Description

**OW Sverniciatore all'acqua** is formulated to remove unwanted coatings, including oils, varnishes, paints, waxes and resins.

It is an excellent choice for indoor projects involving the restoration and repair of musical instruments, furniture, and decorative objects. It effectively dissolves layers of varnish and paint, making them easy to remove using a spatula or scouring pad without damaging the underlying wood or other materials.

Not all coatings or varnishes can be removed with the same ease. It is especially effective with traditional oil-based varnishes. With other types of coatings, it may not be as effective. It should be tested in each case.

This low-odour and non-flammable product is water-based, making it a safer alternative to strong solvents typically used in other removers, which can cause respiratory and skin irritation.

### Composition

A mixture of solvents and water.  
Free from aggressive solvents.  
Easily biodegradable components.

### Properties

Safe, non-flammable, non-irritating.  
Low-odour green viscous liquid.  
Partially miscible with water.

No health or environmental risks, compliant with EU Regulation No. 1272/2008 (CLP).

Free of aggressive solvents.

### Application

It is an easy-to-use, fast-acting and effective product that can be easily applied and washed.

Shake the content until the product becomes perfectly homogenized.

Use a brush to apply the product on the surface to be removed.

Let the product act for at least 5-15 minutes. It can be left longer if necessary, but it should not be left to dry. Leaving it longer than necessary may cause damage to the wood. The time required will depend on the type of varnish, the thickness of the film or the number of layers.

Once the film is softened, scrape it with a spatula or scouring pad. Be careful not to damage the wood. If some varnish remains, repeat the operation until complete removal.

After removing the layer of varnish, clean the surface well with a moistened clean cloth. You can also clean the surface with a solvent if necessary. Let the surface dry completely. There should be no traces of the product on the surface.

## Storage

Store it in its original container, tightly closed, in a fresh place (temperature between 5-35°C), and do not expose it to direct light or outdoor elements. Avoid heat, radiation, static electricity, and contact with food.

Under these conditions, the **Sverniciatore all'acqua** is stable for up to a year. However, depending on storage conditions, the product may separate into phases. In that case, the container should be shaken vigorously to homogenize the mixture.

## Security

According to Regulation No 1272/2008 (CLP), this product is not a hazardous substance or mixture for health or the environment.

The material is readily biodegradable.

Protective gloves against minor hazards and panoramic goggles against splashes and/or projections are recommended to prevent eye or skin contact. Wash off the product immediately if this happens.

Do not ingest. Please keep this product out of children's reach.
